

Auto Loader/ Leg Processor

AUTO LOADER / LEG PROCESSOR LPAL-1

The machine that started the revolution in chicken cut-up more than a decade ago – The FoodCraft Leg Processor – now has a 1990's companion: The Leg Processor Auto Loader, Model LPAL-1. The people at FoodCraft realized that although the Leg Processor continues to be the preferred method of mechanically cutting the back half or saddle, the machine could be further improved. By eliminating loader or operator error, more consistent cuts could be achieved.

The Leg Processor Auto Loader, Model LPAL-1, is an enhancement to the FoodCraft Leg Processor or the Leg Processor with Leg Splitter, Models LP-1 and LP-1/LS-1. It eliminates the need for an operator and increases the through-put of a single leg processor.

The LPAL-1 is designed to be suspended on the line and to easily attach to the front of the FoodCraft Leg Processor. The Auto Loader is line driven, and must be timed to the line shackles. It does not require timing to the LP-1 or LP-1/LS-1.

Supplied as an option, the LPAL-1 in combination with either the LP-1 or LP-1/LS-1 will provide to be the futuristic method for cutting up the back half or saddle, and will enhance your cut-up operation. Eliminate operators, increase through-put, and improve grade while reducing salvage with the addition of the FoodCraft Leg Processor Auto Loader.
